

APPENDIX E

QUALITY ASSURANCE REPORT FOR ANALYTICAL DATA

Quality Assurance Report
Site Investigation Performed at the Forestry Compound-Pelham Range
Parcel HR-84
IT Project No 796887
Fort McClellan Quality Assurance Report

1.0 Overview

Twenty-two soil samples were collected in support of the investigation at Fort McClellan (FTMC) Parcel HR-84, Forestry Compound-Pelham Range. Soil samples were submitted to EMAX Laboratories, Inc. and analyzed for target analyte list (TAL) metals, target compound list (TCL) volatiles, TCL semivolatiles, organochlorinated pesticides, organophosphorus pesticides, and herbicides. QC samples consisted of the following types and quantities: 2 field duplicates (FD), 1 matrix spike/matrix spike duplicate (MS/MSD), and 3 equipment rinsates. An analytical summary table cross-referencing sample location, sample number, and contaminants of concern is presented in Attachment A.

One hundred (100) percent of samples collected were validated and reviewed in accordance with the *USEPA Contract Laboratory Program National Functional Guidelines for Evaluating Inorganic Data Review* (EPA, February 1994) and *USEPA Contract Laboratory Program Nation Functional Guidelines for Organic Review* (EPA, October 1999) for all areas except blanks. Region III *Laboratory Data Validation Functional Guidelines for Inorganic Analyses* (EPA, April 1993) and Region III *National Functional Guidelines for Organic Data Review* (EPA, June 1992) were applied to the areas associated with blank contamination. Data qualifiers assigned to results were based on guidance outlined in the referenced documents and the *Installation-Wide Sampling and Analysis Plan* (IT, March 2000) for FTMC. Table 1.0-1 and Table 1.0-2 define laboratory applied and validation applied data qualifiers assigned to analytical results, respectively.

Table 1.0-1
Laboratory Data Qualifier Definitions

| Data Qualifier | Laboratory Data Qualifier Definition |
|----------------|---|
| B | Analyte detected in method blank at concentration greater than the reporting limit (and greater than zero). |
| C | Confirming data obtained using second GC column or GC/MS. |
| E | Analyte concentration exceeded calibration range. |
| I | Analyte identification suspect. See narrative for explanation. |
| J | Result is less than or equal to specified reporting limit but greater than the method detection limit (MDL). |
| P | Analyte not confirmed. Results from primary and secondary GC columns differ by greater than 10 percent |
| S | Analyte concentration obtained using Method of Standard Additions (MSA). |
| U | Not detected. The value represented indicates the reporting limit for the analysis. |
| D | Sample analyzed as a dilution. The result reported has been calculated using the appropriate dilution factor. |
| No Code | Confirmed identification. |

Table 1.0-2
Validation Data Qualifier Definitions

| Validation Qualifier | Validation Data Qualifier Definition |
|----------------------|--|
| U | Not detected. The associated number indicates approximate sample concentration necessary to be detected. |
| No Code | Confirmed identification |
| B | Not detected substantially above the level reported in laboratory or field blanks. |
| R | Unusable result. Analyte may or may not be present in the sample. |
| N | Tentative identification. Consider present. Special methods may be needed to confirm its presence or absence in future sampling efforts. |
| J | Analyte present. Reported value may not be accurate or precise. Considered an estimate. |
| NJ | Qualitative identification questionable due to poor resolution. Presumptively present at approximate quantity. |

The Data Validation Summary Report is presented in Attachment B.

2.0 Summary

Data were evaluated to verify compliance with precision, accuracy, representativeness, comparability, completeness, and sensitivity. To verify that project data quality objectives (DQO) were met, laboratory analytical results and data packages were examined for compliance with SW846 SW6010B/SW7000 Series, SW8081A, SW8141A, SW8151A, SW8260B and SW8270C quality control (QC) method criteria. Laboratory nonconformances and discrepancies in the data were also examined to determine their impact on the data. The results of this review are presented in the following sections.

2.1 Sample Receipt and Analytical Holding Times

All sample results generated by the laboratory during this investigation have been reviewed with respect to condition of samples as received by the laboratory, chain-of-custody, and analysis holding times. All coolers were received by EMAX in good condition under proper chain-of-custody.

All extraction and analytical holding times were met.

2.2 Rejected Data

Tables 2.2-1 lists all rejected analytical data reported for soil samples. Sample re-collection at this time is not warranted due to all rejected results being reported as non-detect.

Table 2.2-1 Rejected Aqueous Analytical Results

| Sample Delivery Group | Sample Number | Contaminant | Reason |
|------------------------------|---|-----------------------------|---|
| 1084-01 | HT0002, HT0006 & HT0007 | 1,2-Dibromo-3-chloropropane | Calibration Relative Response Factor (RRF) <0.05. |
| | HT0006, HT0008, HT0010, HT0017 & HT0019 | Acetone | Calibration Relative Response Factor (RRF) <0.05. |
| 1084-03 | HT0020, HT0021 & HT0021 | Bromomethane | Calibration Relative Response Factor (RRF) <0.05. |

2.3 Blank Results

A description of the types of blank samples which were collected, processed, and evaluated for background and/or process contamination during this sampling is as follows:

- Equipment rinsates (ER) are samples of analyte-free deionized water poured into, or over, or pumped through the sampling device, collected in a sample container, and transported to the laboratory for analysis. Equipment rinsates are used to assess the effectiveness of equipment decontamination procedures.
- Method blanks (MB) are used in the laboratory to assess and document any possible contamination resulting from the analytical process. A method blank is an analyte-free matrix to which all reagents are added in the same volumes or proportions as used in sample processing. The method blank shall be carried through the complete sample preparation and analytical procedure.

- Initial and continuing calibration blanks (ICB and CCB) are instrument blanks consisting of an analyte-free matrix. ICBs and CCBs are analyzed to verify the analysis system is free of contamination and are analyzed immediately after the initial and continuing calibration is performed.

Field sample concentrations were evaluated to determine if the sample results could have been biased by the presence of any contamination measured in equipment rinsate blanks, method blanks and/or initial/continuing calibration blanks. Sample data affected by blank contamination are summarized in Table 2.3-1.

Table 2.3-1
Summary of Blank Contamination

| Sample Delivery Group | Sample Number | Contaminant | Action |
|-----------------------|---|--------------------|--|
| 1084-01 | HT0001, HT0010, HT0016, HT0019 & HT0023 | Mercury | Mercury results for samples HT0001, HT0010, HT0016, HT0019 and HT0023 were "B" qualified. |
| | HT0001, HT0003, HT0004, HT0006, HT0007, HT0008, HT0009, HT0012, HT0016, HT0018, HT0019 & HT0023 | Potassium | Potassium results for samples HT0001, HT0003, HT0004, HT0006, HT0007, HT0008, HT0009, HT0012, HT0016, HT0018, HT0019 & HT0023 were "B" qualified. |
| | HT0006, HT0008, HT0017 & HT0019 | Cobalt | Cobalt results for samples HT0006, HT0008, HT0017 and HT0019 were "B" qualified. |
| | HT0008, HT0010 & HT0011 | Nickel | Nickel results for samples HT0008, HT0010 and HT0011 were "B" qualified. |
| | HT0002, HT0006, HT0007, HT0008, HT0009, HT0010, HT0012, HT0016, HT0017, HT0018 & HT0019 | Methylene chloride | Methylene chloride results for samples HT0002, HT0006, HT0007, HT0008, HT0009, HT0010, HT0012, HT0016, HT0017, HT0018 & HT0019 were "B" qualified. |
| 1084-02 | HT0013, HT0014 & HT0015 | Methylene chloride | Methylene chloride results for samples HT0013, HT0014 & HT0015 were "B" qualified. |
| | HT0015 | Acetone | Acetone result for sample HT0015 was "B" qualified. |

Table 2.3-1 (Continued)
Summary of Blank Contamination

| Sample Delivery Group | Sample Number | Contaminant | Action |
|-----------------------|-------------------------|----------------------------|---|
| 1084-03 | HT0020, HT0021 & HT0022 | Potassium Mercury | Potassium and mercury results for samples HT0020, HT0021 and HT0022 were "B" qualified. |
| | HT0022 | Methylene chloride Acetone | Methylene chloride and acetone results for sample HT0022 were "B" qualified. |

2.4 Analytical Precision

Precision is defined as a measurement of mutual agreement among individual measurements of the same property, usually under "prescribed similar conditions." Analytical precision is calculated as relative percent difference (%RPD) based on the following formula:

$$\% \text{RPD} = \left| \frac{(A-B)}{(A+B)/2} \right| \times 100$$

where:

%RPD = Relative Percent Difference
 A = original result
 B = duplicate result

A high RPD between an original sample and its field duplicate may be attributable to the difference in sample matrix or distribution of the contaminant within the sample, rather than the precision of the collection process. Also, when "estimated" results are reported, there is a potential for increased variability between the primary and duplicate sample results. This occurs because, at low concentrations, the relative difference in results is magnified by the RPD calculation even though the results are comparable in absolute terms. There is also increased uncertainty in the results as the lower limit of detection is approached, due to decreasing analytical accuracy. The RPD calculation cannot be performed in cases where non-detected results are reported with corresponding samples that contain detectable concentrations.

Overall sampling and analysis precision for this task was assessed using field duplicate (FD) samples. Laboratory precision was assessed by laboratory control sample/laboratory control sample duplicate (LCS/LCSD) and matrix spike/matrix spike duplicate (MS/MSD) recoveries. Results indicate that an acceptable analytical precision was achieved. Table 2.4-1 lists precision acceptance criteria for LCS/LCSD, MS/MSD organic and inorganic analyses and field duplicate comparisons. RPD anomalies are summarized in Table 2.4-2.

Table 2.4-1
Precision Acceptance Criteria

| Field/Laboratory QC Type | Matrix |
|--|--|
| | Soil |
| Field Duplicate (Both Organic & Inorganic) | RPD < 50 |
| Chlorinated Pesticides LCS/LCSD & MS/MSD | Refer to Table 8-1 of FTMC "Installation Wide Sample and Analysis Plan" |
| Organophosphorus Pesticides LCS/LCSD & MS/MSD | Refer to Table 8-1 of FTMC "Installation Wide Sample and Analysis Plan" |
| Herbicides LCS/LCSD & MS/MSD | Refer to Table 8-1 of FTMC "Installation Wide Sample and Analysis Plan" |
| VOC LCS/LCSD & MS/MSD | Refer to Table 8-1 of FTMC "Installation Wide Sample and Analysis Plan" |
| SVOC LCS/LCSD & MS/MSD | Refer to Table 8-1 of FTMC "Installation Wide Sample and Analysis Plan" |
| Metals LCS/LCSD & MS/MSD | RPD < 20 |

Table 2.4-2 Summary of Field Duplicate, LCS/LCSD & MS/MSD RPD Anomalies

| Sample Delivery Group | Sample Number | Contaminant | Assigned Validation Qualifier |
|-----------------------|--------------------------------|----------------------------------|--|
| 1084-01 | HT0001 MS/MSD | Calcium (30%) Magnesium (26%) | Calcium and magnesium results for samples HT0001 through HT0004, HT0006 through HT0012, HT0016 through HT0019 and HT0023 were "J" qualified due to MS/MSD RPD exceeding QC criteria. |
| 1084-02 | HT0013 MS/MSD | Antimony (36%) | Antimony results for samples HT0013, HT0014 and HT0015 were "UJ" qualified due to MS/MSD RPD exceeding QC criteria. |
| | HT0013 (Parent) / HT0014 (FD) | Toluene (63.5%) | Toluene results for samples HT0013 and HT0014 were "J" qualified due to failing RPD between parent sample and its corresponding field duplicate |
| 1084-03 | IPD064SL / IPD064SC (LCS/LCSD) | Silver (32%) | Silver results for samples HT0020, HT0021 and HT0022 were "UJ" qualified due to LCS/LCSD RPD exceeding QC criteria. |

2.5 Analytical Accuracy Assessment

Accuracy is a measure of the degree of agreement of a result against an accepted reference or true value. Accuracy is expressed as a percent recovery (%R) calculated by the ratio of the measurement and accepted true value as shown in the following equation:

$$\%R = (|X_s - X_u|/K) \times 100$$

where:

X_s = measured value of the spiked sample

X_u = measured value of the unspiked sample

K = known amount of the spike in the sample

Surrogate recoveries, MS/MSD and LCS/LCSD, were used to measure analytical accuracy as described in SW846 SW6010B/SW7000 Series methodology, organochlorinated pesticides by SW8081A, organophosphorus pesticides by SW8141A, herbicides by SW8151A, TCL volatiles by SW8260B and TCL semivolatiles by SW8270C. Reported results indicate that an acceptable level of analytical accuracy was achieved. Surrogate, LCS/LCSD, and MS/MSD QC exceedances are summarized in Table 2.5-1.

Table 2.5-1 Summary of Surrogate, LCS/LCSD and MS/MSD Spike Recovery QC Exceedances

| Sample Delivery Group | Sample Number | Contaminant | Action |
|-----------------------|---------------|--|---|
| 1084-01 | HT0001 MS/MSD | Aluminum (HB) Antimony (LB) Calcium (LB) Iron (LB) Magnesium (LB) Manganese (LB) Zinc (LB) | Aluminum, antimony, calcium, iron, magnesium, manganese and zinc results for samples HT0001 through HT0004, HT0006 through HT0012, HT0016 through HT0019 and HT0023 were "J" / "UJ" / "B" qualified due to MS/MSD spike recoveries exceeding QC criteria. |
| | HT0004 | Acetone Toluene | Acetone and toluene results for sample HT0004 were "J" qualified due to surrogate recoveries exceeding QC criteria (Bromofluorobenzene - HB). |
| | HT0009 | Acetone Methylene chloride | Acetone and methylene chloride results for sample HT0009 were "J"/"B" qualified due to surrogate recoveries exceeding QC criteria (Bromofluorobenzene - HB). |
| 1084-02 | HT0013 MS/MSD | Antimony (LB) Barium (HB) | Antimony and barium results for samples HT0013, HT0014 and HT0015 were "J" / "UJ" qualified due to MS/MSD spike recoveries exceeding QC criteria. |

**Table 2.5-1 Summary of Surrogate, LCS/LCSD and MS/MSD Spike Recovery
QC Exceedances (Continued)**

| Sample Delivery Group | Sample Number | Contaminant | Action |
|-----------------------|-----------------------------------|-------------|--|
| 1084-03 | IPD064SL / IPD064SC (LCS/LCSD) | Silver (LB) | Silver results for samples HT0020, HT0021 and HT0022 were "UJ" qualified due to LCSD spike recovery exceeding QC criteria. |

HB - High bias

LB - Low bias

2.6 Data Representativeness

Representativeness is a qualitative parameter that expresses the degree to which sample data actually represent the matrix conditions. Sample locations were selected to investigate whether contaminated media exists at this site. Soil sample data will also be used to assess potential impacts to terrestrial biota that might utilize the site for food and/or habitat purposes.

Standardized requirements and procedures for sample collection and handling were employed to maximize sample representativeness.

2.7 Data Comparability

Comparability is a qualitative parameter expressing the confidence with which one data set can be compared with another. By employing well-recognized techniques and accepted standardized methods for sampling and analysis, data comparability was achieved during this sampling event.

2.8 Data Completeness

Completeness is calculated for the aggregation of data for each analyte measured during the investigation of Parcel HR-84, Forestry Compound-Pelham Range. The formula for calculating completeness is listed below:

$$\% \text{ Completeness} = (X_V / X_T) \times 100$$

where:

$$X_V = \text{number of valid (i.e., non-``R''-flagged) results}$$

$$X_T = \text{number of possible results}$$

Parcel HR-84 requirement for completeness is 95% for soil samples. The % Completeness for this task is calculated to be 99.8%

- % Completeness = $(4565 / 4576) \times 100 = 99.8\%$.

2.9 Sensitivity

Sensitivity is defined as the ability of the laboratory's established method detection limits (MDL)/method reporting limits (MRL or RL) to meet project-specific DQOs or site-specific screening levels (SSSL) and or ecological screening values (ESV).

MDL is the minimum concentration of a substance that can be measured and reported with 99 percent confidence that the analyte concentration is greater than zero. MDLs are determined from an analysis of a sample in a given matrix containing the target analyte of interest. The MRL is a threshold value based upon the sensitivity capability of method and instrument. MRLs are normally set at a minimum of two times the MDL. MRLs are adjusted based on the sample matrix, moisture (solids only), and any necessary sample dilutions. The laboratory cannot reliably quantitate values reported above the MDL but below the MRL. Therefore, these analyte values must be flagged as estimated quantities ("J"-flagged).

To evaluate method sensitivity, a general comparison of the laboratory's MDLs/MRLs and the site investigation screening levels (background values, human health SSSL for residential reuse, and ESV) was performed and presented to the FTMC Base Realignment and Closure Team (BCT) (November 1999). The comparison summarized the relationship between the MDL/MRLs and SSSL/ESVs for each parameter typically reported for all of the major analytical methods used at FTMC. The few cases identified where the MDL and/or MRL values exceeded their corresponding human health SSSL and/or ESV were specifically highlighted and explained. It was understood that for these cases, the standard analytical method of analysis was not going to provide MDLs/MRLs which met human health SSSLs or ESVs without significant uncertainty and the possibility of reporting false negatives. It was generally accepted that standard EPA SW846 analytical methods would provide sufficient sensitivity for data reported and used in the site screening process at FTMC.

3.0 Data Usability

Data quality indicators (DQI) provide an internal guide for control and review to verify that data are scientifically sound, defensible, and of known and acceptable quality. Factors such as precision, accuracy, representativeness, comparability, completeness, and sensitivity were evaluated to determine if the project's DQOs were met. A review of the data revealed that the majority of QA/QC indicators were within acceptable control limits. Any data anomalies encountered during data validation and overall site evaluations have been summarized in the previous sections of this document.

Based on the results of data validation and QA review, IT has concluded that representative samples were collected and analyzed and the results are indicative of the media analyzed. The data are to be considered representative of site conditions and are usable for their intended purpose.

for the Site Investigation Performed at the
Forestry Compound-Pelham Range (Parcel HR-84)
Fort McCellan**

1.0 Introduction

Level III data validation was performed on 100% of the environmental samples collected at Parcel HR-84. The analytical data consisted of three sample delivery groups (SDGs): 1084-01, 1084-02, and 1084-03, which were analyzed by EMAX Laboratories. The chemical parameters for which the samples were analyzed, are identified below:

| Parameter (Method) |
|---|
| Volatile Organics by GC/MS SW846 8260B |
| Semivolatiles by GC/MS SW846 8270C |
| Metals by SW846 6010B and 7471A |
| Herbicides by SW846 8151A |
| Organochlorinated Pesticides by SW846 8081A |
| Organophosphorus Pesticides by SW846 8141A |

2.0 Procedures

The sample data were validated following the logic identified in the *USEPA Contract Laboratory Program (CLP) National Functional Guidelines For Inorganic Data Review (February 1994)* and *USEPA Contract Laboratory Program National Functional Guidelines For Organic Review (October 1999)* for all areas except Blanks. *Region III Laboratory Data Validation Functional Guidelines for Evaluating Inorganic Analyses (April 1993)* and *Region III National Functional Guidelines for Organic Data Review (June 1992)* were applied to the areas associated with blank contamination. Specific quality control (QC) criteria, as identified in the Quality Assurance Plan (QAP), analytical methods, and laboratory Standard Operating Procedures (SOP's) were applied to all sample results. As the result of the use of Update III SW846 test methods for the analytical data and the application of the CLP guidelines during the validation process, there were instances where specific QC requirements for all target compounds were not defined. This primarily occurred in the organic, Gas Chromatograph (GC) and Gas Chromatograph/Mass Spectra (GC/MS) calibration areas and is due to the fact that the analytical methods are "performance-based", and allows the use of average calibration responses, in lieu of, individual responses, which are defined by CLP protocol. In light of applying CLP guidelines to SW846 methods and evaluating the usability of the data during the validation process, specific QC criteria were determined to address all target compounds and

are identified in this report for each parameter, as well as, in the validation checklists, which function as worksheets. All completed validation checklists are on file in the Knoxville office. For those analytical methods not addressed by the CLP and Region III guidelines, the validation was based on the method requirements (i. e. SW846, CFR, SOP's, QAP) and technical judgement following the logic of the CLP validation guidelines.

3.0 Summary of Data Validation Findings

The overall quality of the data was determined to be acceptable with minimal qualification. The only rejected data ("R" qualified) was due to "poor performing" volatile compounds (Ketones, some halogenated hydrocarbons, etc.), which experienced poor calibration responses in the associated calibration data, and samples that were reanalyzed and have more than one results reported. The "R" qualifier was assigned to the samples with more than one set of results to indicate that a given result should not be used to characterize a particular constituent or an analysis for a given sample.

Individual validation reports have been prepared for each parameter in each SDG and the overall results of the validation findings are summarized in this report. The validation qualifier data entry verification report (Attachment A) is also provided. This is a complete listing of all of the analytical results and the validation qualifiers assigned for HR-84. It also identifies the 'use' column, which indicates which result to use in the event of a reanalysis. A listing of the validation qualifiers and the reason codes, along with their definitions is also found in Attachment A. The following section highlights the key findings of the data validation for each analysis.

4.0 Analysis-Specific Data Validation Summaries

4.1 Volatile Organics by GC/MS SW846 8260B

Overall, the data are of good quality and are usable as reported by the laboratory with the exceptions noted below. Data were reviewed for the following:

Holding Times

Technical holding time criteria were met for all samples.

Initial and Continuing Calibration

The initial calibration and continuing calibrations associated with the project samples met QC criteria, with the exception of the following:

- The following exhibited individual ICAL/CCAL RRF < 0.1:

| SDG Number | Samples Affected | Compound(s) | Validation Qualifier |
|------------|------------------------|-----------------------------|----------------------|
| 1084-01 | All Samples | Acetone | J/R |
| | HT0002, HT0006, HT0007 | 1,2-Dibromo-3-Chloropropane | R |
| 1084-02 | All Samples | Acetone | J/B |
| 1084-03 | All Samples | Bromomethane | R |
| | HT0022 | Acetone | B |

- The following exhibited individual CCAL %D's > 20%:

| SDG Number | Samples Affected | Compound(s) | Validation Qualifier |
|------------|---|---|----------------------|
| 1084-01 | All Samples | Acetone | J/R |
| | HT0001, HT0002, HT0006, HT0007, HT0023 | Carbon Disulfide, Dichlorodifluoromethane, Methylene Chloride | J/UJ//B |
| | HT0001, HT0023 | 1,1,1,2-Tetrachloroethane | UJ |
| | HT0003, HT0004, HT0008, HT0009, HT0010, HT0012, HT0016, HT0017, HT0018, HT0019, | 2-Butanone, Carbon Disulfide, Dichlorodifluoromethane | J/UJ |
| | HT0001, HT0023 | 2-Butanone | J/UJ |
| | HT0011 | 2-Butanone, Carbon Disulfide | UJ |
| 1084-02 | All Samples | Sec-Dichloropropane | UJ |
| 1084-03 | All Samples | Bromochloromethane | UJ |
| | HT0022 | 2-Hexanone, Bromomethane | UJ |

Blanks

The 5X/10X rule for contaminants found in the associated equipment rinses, trip blanks, and method blanks was applied to all sample results. All were found to be acceptable with the exception of the following:

Note: 'B' Qualifiers were applied to all of the following sample results.

| SDG | Samples Affected | Analyte/Analytes | Associated Blank Contamination |
|---------|--|-----------------------------|--------------------------------|
| 1084-01 | HT0002, HT0006, HT0007, HT0008, HT0009, HT0010, HT0012, HT0016, HT0017, HT0018, HT0019 | Methylene chloride | Method/TB/ER |
| 1084-02 | All Samples | Methylene chloride | Method |
| | HT0015 | Acetone | ER |
| 1084-03 | HT0022 | Methylene chloride, Acetone | Method/ER |

'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers, assigned due to quantitation.

Surrogate Recoveries

All surrogate recoveries are within acceptable QC limits with the exception of the following:

| SDG Number | Samples Affected | Compound(s) | Validation Qualifier |
|------------|------------------|-----------------------------|----------------------|
| 1084-01 | HT0004 | Acetone, Toluene | J |
| | HT0009 | Acetone, Methylene Chloride | J/B |

Matrix Spike / Matrix Spike Duplicate

MS/MSD was performed for the project samples and all QC criteria were met.

Laboratory Control Sample (LCS)

LCS was performed for the project samples and all QC criteria were met.

Field Duplicates

Original and field duplicate results were evaluated and no problems were identified with the exception of the following, which exceeded RPD (50%) QC criteria:

| SDG | Samples Affected | Analyte / Analytes | Validation Qualifier |
|---------|--------------------------------|--------------------|----------------------|
| 1084-02 | HT0013 (Original), HT0014 (FD) | Toluene | J |

Internal Standards

All internal standards met QC criteria

Quantitation

Results quantified between the MDL and the RL, which the lab qualified as "J," were qualified as estimated 'J' unless blank contamination was present or the results were rejected.

4.2 Semivolatiles by GC/MS SW846 8270C

Overall, the data are of good quality and are usable as reported by the laboratory with the exceptions noted below. Data were reviewed for the following:

Holding Times

Technical holding time criteria were met for all samples.

Initial and Continuing Calibration

All initial and continuing calibrations associated with the project samples met QC criteria with the exception of the following:

- The following exhibited individual ICAL %RSD>30 and/or CCAL %D>20:

| SDG | Samples Affected | Analyte/Analytes | Validation Qualifier |
|---------|------------------------|--------------------------------------|----------------------|
| 1084-01 | HT0016, HT0018, HT0023 | 2,4,5-Trichlorophenol, 4-Nitrophenol | UJ |

Blanks

The 5X/10X rule for contaminants found in the associated equipment rinses and method blanks was applied to all sample results. All were acceptable.

Surrogate Recoveries

All surrogate recoveries met QC criteria.

Matrix Spike / Matrix Spike Duplicate

MS/MSD were evaluated and no problems were noted and all QC criteria were met.

Laboratory Control Sample (LCS)

LCS was performed for the project samples and all QC criteria were met.

Field Duplicates

Original and field duplicate results were evaluated and no problems were noted.

Internal Standards

All internal standards met QC criteria.

Quantitation

Results quantified between the MDL and the RL, which the lab qualified as "J," were qualified as estimated 'J' unless blank contamination was present or the results were rejected. Results rejected in favor of a preferred result (e.g., due to dilution or reanalysis) were qualified as rejected 'R'.

4.3 Metals by SW846 6010B/7471A

Overall, the data are of good quality and are usable as reported by the laboratory with the exceptions noted below. Data were reviewed for the following:

Holding Times

Technical holding time criteria were met for all samples.

Initial and Continuing calibrations

All initial and continuing calibrations associated with the project samples met QC criteria.

Blanks

The 5X rule for contaminants found in the associated equipment rinse, calibration, and method blanks was applied to all sample results. All were acceptable with the exceptions noted below:

Note: 'B' Qualifiers were applied to all of the following sample results.

| SDG | Samples Affected | Element/Elements | Associated Blank Contamination |
|---------|--|--------------------|--------------------------------|
| 1084-01 | HT0001, HT0010, HT0016, HT0019, HT0023 | Mercury | ICB/CCB |
| | HT0001, HT0003, HT0004, HT0006, HT0007, HT0008, HT0009, HT0012, HT0016, HT0018, HT0019, HT0023 | Potassium | ICB/CCB |
| | HT0006, HT0008, HT0017, HT0019 | Cobalt | ICB/CCB |
| | HT0008, HT0010, HT0011 | Nickel | Method |
| 1084-03 | All Samples | Mercury, Potassium | Method/ICB/CCB |

'B' qualifiers assigned to designate blank contamination, which are identification qualifiers, take precedence over estimating qualifiers, assigned due to quantitation.

Matrix Spike / Matrix Spike Duplicate

Batch QC was performed for the project samples and all QC criteria were met, with the exception of the following:

| SDG | Samples Affected | Element/Elements | Validation Qualifier |
|---------|------------------|---|----------------------|
| 1084-01 | All Samples | Aluminum, Antimony, Calcium, Iron, Magnesium, Manganese, Zinc | B/J/UJ |
| 1084-02 | All Samples | Antimony, Barium | J/UJ |
| 1084-03 | All Samples | Aluminum, Antimony, Iron, Manganese, Zinc | J/UJ |

Laboratory Control Sample (LCS)

All QC criteria were met for the LCS associated with the project sample analyses with the exception of the following:

| SDG | Samples Affected | Element/Elements | Validation Qualifier |
|---------|------------------|------------------|----------------------|
| 1084-03 | All Samples | Silver | UJ |

Interference Check Sample (ICS)

All ICS % recoveries for the project samples were acceptable.

ICP Serial Dilutions

All QC criteria were met with the exception of the following:

| SDG | Samples Affected | Element/Elements | Validation Qualifier |
|---------|------------------|------------------|----------------------|
| 1084-01 | All Samples | Zinc | J |
| 1084-02 | All Samples | Chromium | J |

Field Duplicates

Original and field duplicate results were evaluated and no problems were identified.

Sample Quantitation

Results quantified between the IDL and the RL ('J' flagged by the laboratory) were qualified as estimated (J).

4.4 Herbicides SW846 8151A

Overall, the data are of good quality and are usable as reported by the laboratory. Data were reviewed for the following:

Holding Times

Technical holding time criteria were met for all samples.

Initial and Continuing Calibration

All initial and continuing calibrations associated with the project samples met QC criteria.

Blanks

The 5X rule for contaminants found in the associated equipment rinses and method blanks was applied to all sample results. All were found to be acceptable.

Surrogate Recoveries

All surrogate recoveries are within acceptable QC ranges.

Matrix Spike / Matrix Spike Duplicate

Batch QC was performed for the project samples and all QC criteria were met.

Laboratory Control Sample (LCS)

LCS was performed for the project samples and all QC criteria were met.

Field Duplicates

Original and field duplicate results were evaluated and no problems were identified.

Quantitation

Results quantified between the MDL and the RL, which the lab qualified as "J," were qualified as estimated 'J' unless blank contamination was present or the results were rejected.

4.5 Organochlorinated Pesticides by SW846 8081A

Overall, the data are of good quality and are usable as reported by the laboratory with the exceptions noted below. Data were reviewed for the following:

Holding Times

Technical holding time criteria were met for all samples.

Initial and Continuing Calibration

All initial and continuing calibrations associated with the project samples met QC criteria.

Blanks

The 5X rule for contaminants found in the associated equipment rinses and method blanks was applied to all sample results. All were found to be acceptable.

Surrogate Recoveries

All surrogate recoveries are within acceptable QC ranges.

Matrix Spike / Matrix Spike Duplicate

Batch QC was performed for the project samples and all QC criteria were met.

Laboratory Control Sample (LCS)

LCS was performed for the project samples and all QC criteria were met.

Field Duplicates

Original and field duplicate results were evaluated and no problems were identified.

2nd Column Confirmation

The 25% Difference QC criteria were met for all confirmed positive results for the project samples with the exception of the following:

| SDG | Samples Affected | Element/Elements | Validation Qualifier |
|---------|------------------|------------------|----------------------|
| 1084-02 | HT0021 | Alpha Chlordane | J |

Quantitation

Results quantified between the MDL and the RL, which the lab qualified as "J," were qualified as estimated 'J' unless blank contamination was present or the results were rejected.

4.6 Organophosphorus Pesticides by SW846 8141A

Overall, the data are of good quality and are usable as reported by the laboratory. Data were reviewed for the following:

Holding Times

Technical holding time criteria were met for all samples.

Initial and Continuing Calibration

All initial and continuing calibrations associated with the project samples met QC criteria.

Blanks

The 5X rule for contaminants found in the associated equipment rinses and method blanks was applied to all sample results. All were found to be acceptable.

Surrogate Recoveries

All surrogate recoveries are within acceptable QC ranges.

Matrix Spike / Matrix Spike Duplicate

Batch QC was performed for the project samples and all QC criteria were met.

Laboratory Control Sample (LCS)

LCS was performed for the project samples and all QC criteria were met.

Field Duplicates

Original and field duplicate results were evaluated and no problems were identified.

Quantitation

Results quantified between the MDL and the RL, which the lab qualified as "J," were qualified as estimated 'J' unless blank contamination was present or the results were rejected.

Attachment A:
Data Validation Qualifier Entry Verification Report

Validation Qualifiers

- U** Not detected. The compound/analyte was analyzed for, but not detected above the associated reporting limit.
- J** The compound/analyte was positively identified; the reported value is the estimated concentration of the constituent detected in the sample analyzed.
- B** The concentration reported was detected significantly above the levels reported in the associated equipment rinse samples and/or laboratory method and trip blanks. (5X/10X Rule was applied).
- R** The reported sample results are rejected due to the following:

 - 1. Severe deficiencies in the supporting quality control data.
 - 2. Anomalies noted in the sampling and/or analysis process which could affect the validity of the reported data.
 - 3. The presence or absence of the constituent cannot be verified based on the data provided.
 - 4. To indicate not to use a particular result in the event of a reanalysis.
- UJ** The compound/analyte was analyzed for, but not detected above the established reporting limit. However, review and evaluation of supporting QC data and/or sampling and analysis process have indicated that the “nondetect” may be inaccurate or imprecise. The nondetect result should be estimated.

Validation Reason Code Definitions

| Reason Code | Description |
|--------------------|---|
| 01 | Sample received outside of 4+/-2 degrees Celsius |
| 01A | Improper sample preservation |
| 02 | Holding time exceeded |
| 02A | Extraction |
| 02B | Analysis |
| 03 | Instrument performance – outside criteria |
| 03A | BFB |
| 03B | DFTPP |
| 03C | DDT and/or Endrin % breakdown exceeds criteria |
| 03D | Retention time windows |
| 03E | Resolution |
| 04 | Initial calibration results outside specified criteria |
| 04A | Compound mean RRF QC criteria not met |
| 04B | Individual % RSD criteria not met |
| 04C | Correlation coefficient >0.995 |
| 05 | Continuing calibration results outside specified criteria |
| 05A | Compound mean RRF QC criteria not met |
| 05B | Compound % D QC criteria not met |
| 06 | Result qualified as a result of the 5x/10x blank correction |
| 06A | Method or preparation blank |
| 06B | ICB or CCB |
| 06C | ER |
| 06D | TB |
| 06E | FB |
| 07 | Surrogate recoveries outside control limits |
| 07A | Sample |
| 07B | Associated method blank or LCS |
| 08 | MS/MSD/Duplicate results outside criteria |
| 08A | MS and/or MSD recovery not within control limits (accuracy) |
| 08B | % RPD outside acceptance criteria (precision) |
| 09 | Post digestion spike outside criteria (GFAA) |
| 10 | Internal standards outside specified control limits |
| 10A | Recovery |
| 10B | Retention time |
| 11 | Laboratory control sample recoveries outside specified limits |
| 11A | Recovery |
| 11B | % RPD (if run in duplicate) |
| 12 | Interference check standard |
| 13 | Serial dilution |
| 14 | Tentatively identified compounds |
| 15 | Quantitation |
| 16 | Multiple results available; alternate analysis preferred |
| 17 | Field duplicate RPD criteria is exceeded |
| 18 | Percent difference between original and second column exceeds QC criteria |
| 19 | Professional judgement was used to qualify the data |
| 20 | Pesticide clean-up checks |
| 21 | Target compound identification |
| 22 | Radiological calibration |
| 23 | Radiological quantitation |
| 24 | Reported result and/or lab qualifier revised to reflect validation findings |
