Mobile, AL 36602

Contract: **Contract No. DACA21-96-D-0018/CK09**
Fort McClellan, Alabama

Subject: **Results of Well and Spring User Survey North of Landfill No. 3, Parcel 80(6)**

Dear Mr. Coker:

This package provides you the results of the Well and Spring User Survey conducted by Shaw Environmental Inc. (Shaw) north of Landfill No. 3, Parcel 80(6). These results were presented to the BCT at the April 2003 team meeting and are now being provided for your information and records. Additionally, Shaw has nearly completed its task to sample 47 monitoring wells and 1 domestic (Lowery) well in the vicinity of Landfill No. 3, and 2 City of Weaver municipal wells. These results are scheduled for presentation to the BCT in July 2003.

Purpose and Methodology

The purpose of the survey was to identify the location and use of active and inactive water supply wells and springs within the defined study area shown on Figure 1. This information is to support the ongoing groundwater Remedial Investigation (RI) at Landfill No. 3 and identify wells or springs that may be sampled in the future.

The Army mailed questionnaires regarding the presence or absence of wells and springs to 565 property owners (representing 794 properties) on January 6, 2003. Questionnaires were sent to property owners identified in Tables 1 and 2. Property owners who did not respond to the questionnaire received a follow-up visit conducted March 3rd through 13th, 2003. Property owners within the defined study area were identified from information obtained from the Calhoun County, Alabama tax office. The methodology employed by Shaw to develop the list of property owners for this survey was presented in a letter from Jeanne Yacoub of Shaw (formerly IT Corporation) to your attention dated November 15, 2002.

Results

Of the 565 questionnaires mailed in January 2003, the Army received 252 responses. Shaw personnel visited the remaining 313 property owners in March 2003 during the follow-up door-to-door visits. Property owners who responded to the mail questionnaire were generally not visited or contacted unless they owned multiple properties. Table 1 includes the list of properties where wells or springs were identified. Figure 1 shows the survey area and the approximate locations of wells and springs identified during the survey. Table 2 includes the list of properties where no wells or springs were identified. Based on information received from the survey, Shaw has identified the following number of wells and springs north of Landfill No. 3:

- 111 property owners were identified with wells or springs
  - 4 property owners have more than 1 well
  - 3 property owners have both a well and a spring
- 96 owners were identified with wells
  - 19 owners have a well used for drinking water
  - 5 owners have a well occasionally used for drinking water (and are also on municipal water supply)
  - 16 owners use a well for purposes other than drinking water (irrigation, restrooms)
  - 56 owners have an unused well (may be abandoned)
- 18 owners were identified with springs
  - 1 owner uses a spring for drinking water
  - 4 owners use a spring for purposes other than drinking water
  - 13 owners have an unused spring (3 are wet weather springs).

As shown in Figure 1, wells and springs identified during the survey were assigned a number corresponding to the property owner listed in Table 1. A total of 20 wells and 3 springs have been identified within an approximate one-mile radius of the northwest corner of the Main Post of Fort McClellan. Four of these wells (numbers 17, 18, 23, and "Cobb") and one spring (number 1) were identified as being used for potable water.

Closer to Landfill No. 3, six wells (numbers 39, 84, 85, 86, 87, and 88) were identified within approximately 1600 feet of Landfill No. 3. None of these wells were identified as potable water sources. However one well (number 39) was identified for use as a water source for a restroom within a business establishment. Two of the wells (Lowery well, number 84 and Medders well, number 86) have been previously sampled in conjunction with the groundwater RI at Landfill No. 3.

At your request, I have distributed copies of this document as indicated below. If you have questions, or need further information, please contact me at (770) 663-1429 or Josh Jenkins at (770) 667-7795.

Sincerely,

Joshua A. Jenkins for

Jeanne A. Yacoub, P.E.

Table 2

Properties Surveyed with No Wells or Springs Identified
Domestic Well and Spring Survey North of Landfill No. 3
Fort McClellan, Calhoun County, Alabama

Notes:

Parcel ID # , owner name, and mailing address were obtained from Calhoun County, Alabama tax office.
NA - Not applicable

1- The property was visited during the field survey performed March 3 - 13, 2003 to confirm with the owner or residence the status of wells or springs on the property. If no one could be contacted during the initial visit, a flyer was left at the property explaining the well & spring survey including a phone number to call with information. Even though the property was visited (some parcels were visited more than once) and a flyer provided, survey personnel where still unable to make contact with the owner or resident.

subdivision), the property was classified with neither a well or spring.

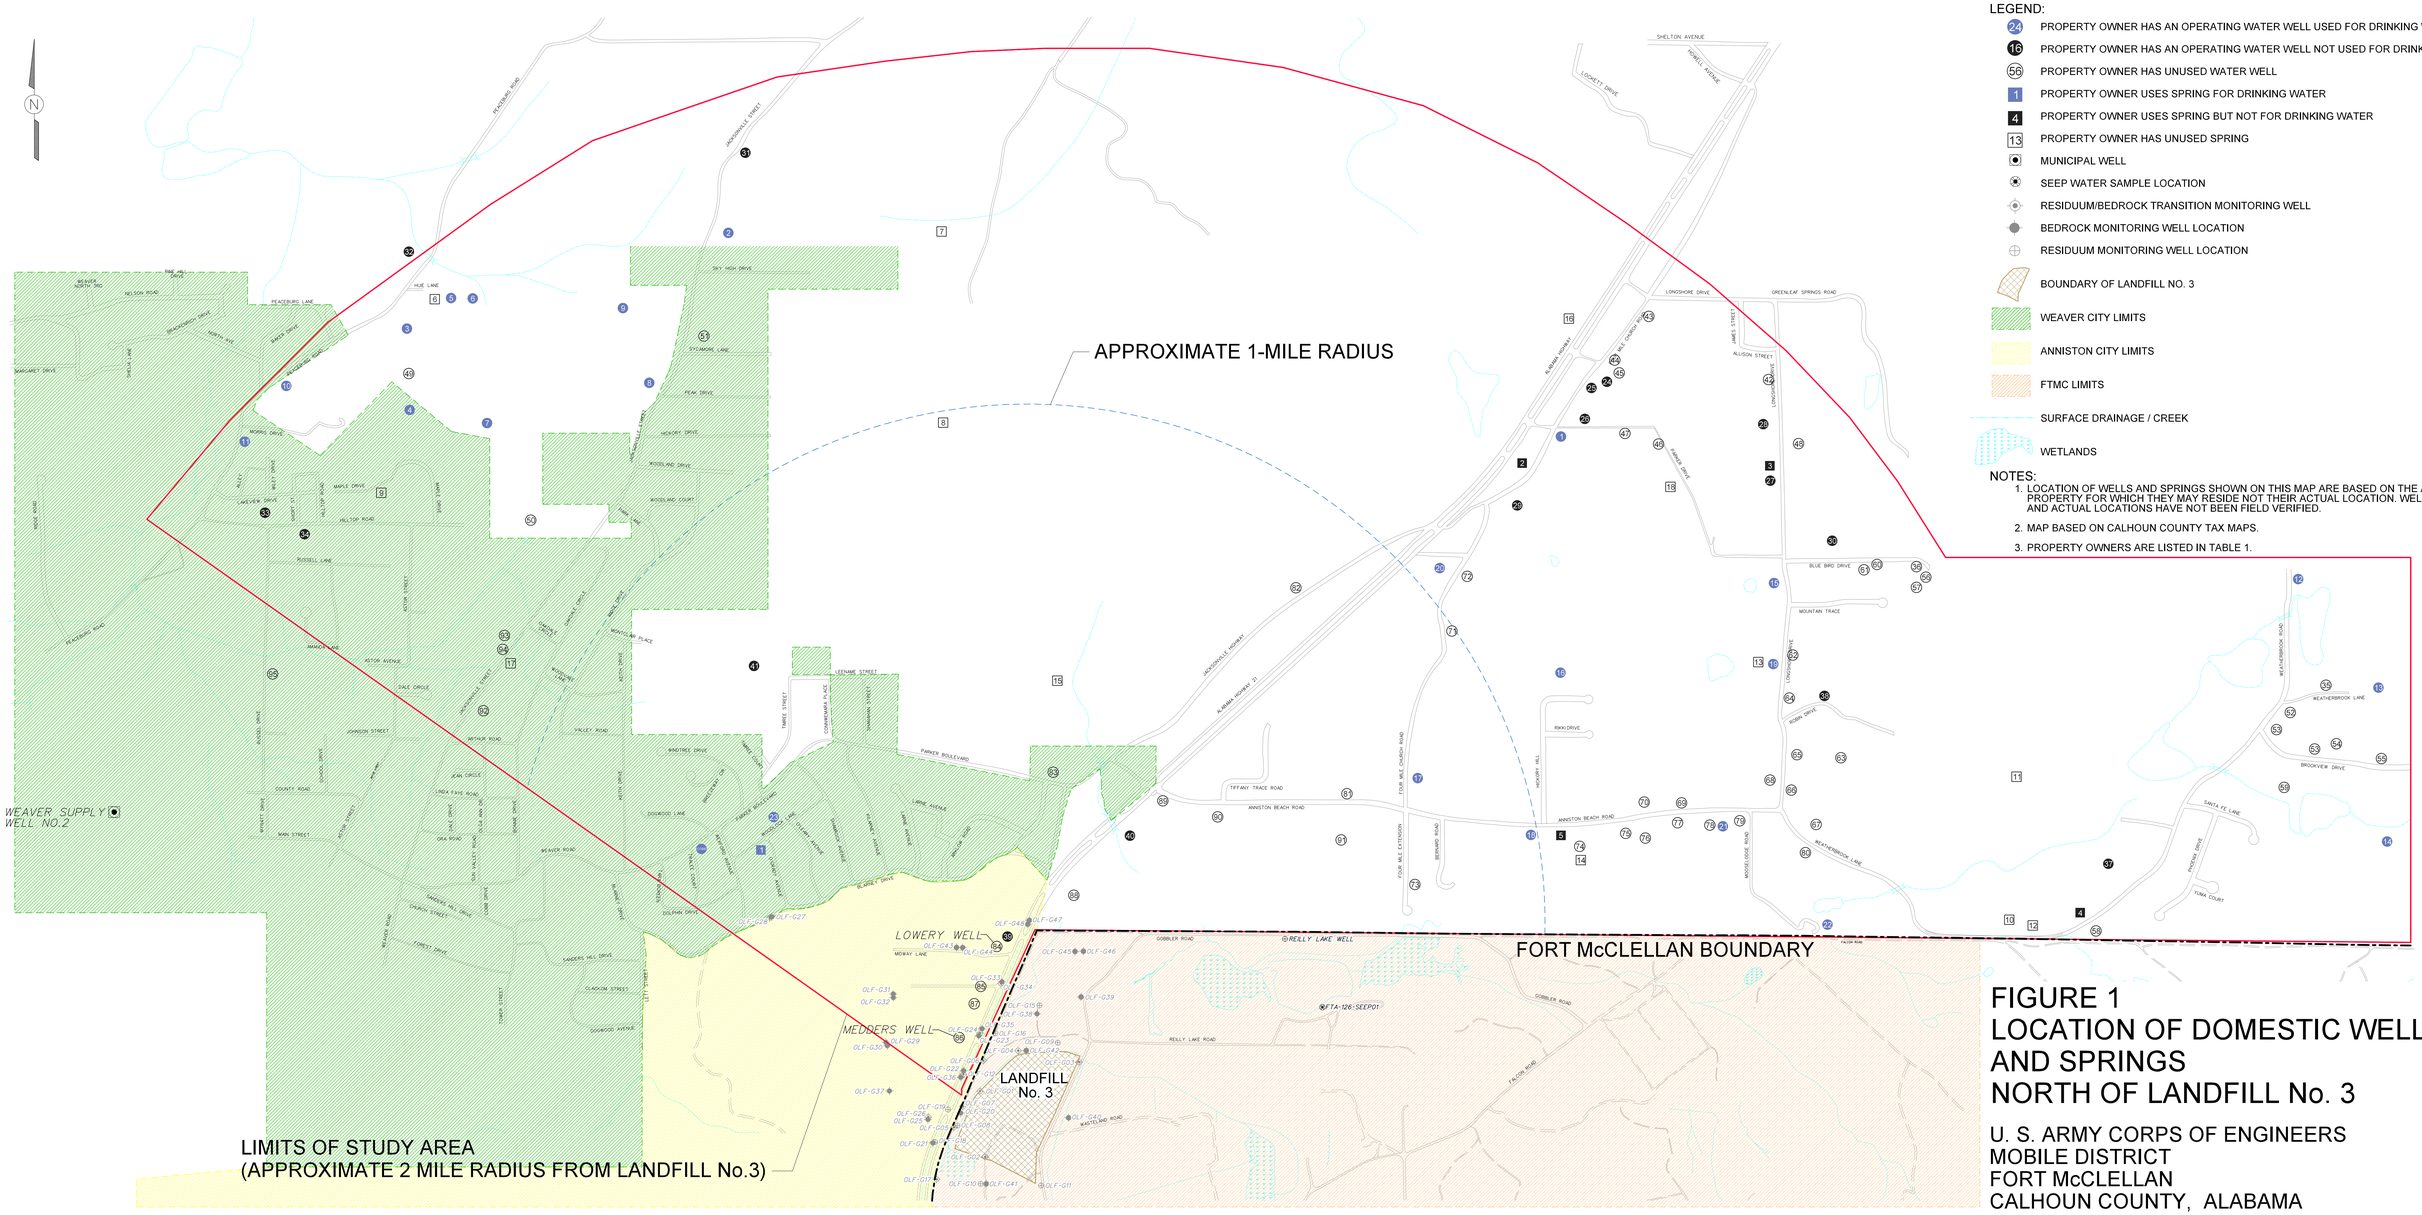
2 - Property owner returned the mail card with nothing marked on the card. It appears that these owners returned the card to notify that they have no well or spring. This has not been verified.

3 - Undeveloped lot or land.

4 - Field survey personnel could not contact the property owner or resident during the field survey performed March 3 through 13 , 2003. However, based on the location of the property, the age of the dwelling on the property, and the status of the surrounding properties, no judgment could be made whether there is a well or spring.

5 - Inaccessible property .

6 - ~~Strikethrough~~ owner name obtained from Calhoun County tax office. The current property owner is listed in lowercase letters and was obtained from questionnaire or site visit.



LEGEND:

- PROPERTY OWNER HAS AN OPERATING WATER WELL USED FOR DRINKING WATER
- PROPERTY OWNER HAS AN OPERATING WATER WELL NOT USED FOR DRINKING WATER
- PROPERTY OWNER HAS UNUSED WATER WELL

VARIANCE REPORTS

INTERNATIONAL TECHNOLOGY CORPORATION

Variance No: PARCEL80JUNE01.VR1

Linked w/NC No: X

Date of Issue: 6/21/01

Page _1 of 1__

Project Name: **Fort McClellan** - CK09

Project Number: 796886.01060400

-Variance Report -

I.Description: (by the person identifying the change)

FINAL SITE-SPECIFIC FIELD SAMPLING PLAN, LANDFILL NO. 3, PARCEL 80(6).

The Final Site-Specific Field Sampling Plan (FSSFSP) proposed the installation of two residuum monitoring wells and seven bedrock monitoring wells (OLF-G20 through OLF-G28). The wells were to be constructed with a five-foot bentonite seal above the filter pack and completed with a bentonite-cement grout from the top of the bentonite seal to ground surface. Monitoring well OLF-G27 was constructed using a 244 foot bentonite seal from the top of the filter pack to above the top of fractured bedrock and the water table. Once the bentonite seal was above the top of bedrock and the water table, bentonite-cement grout was used to grout the remaining annular space to ground surface.

Identified by: Wally Cooper, Geologist

Date: 6-21-01

II. Justification for Variance:

During rock coring at monitoring well location OLF-G27, numerous fractures and voids were encountered. Because of the concern of cement grout migrating through fractures and affecting the groundwater pH, a bentonite seal was used from the top of the filter pack to above the top of bedrock and the water table. Bentonite-cement grout was used to grout the remaining annular space from the top of the bentonite seal to ground surface. This variance will not alter the scope or intent of the Groundwater Monitoring Well Installation and Field Sampling Plan at Landfill 3.

III. Applicable Document/Work Plan: (by the person identifying the change)

I.Description: (by the person identifying the change)

FINAL SITE-SPECIFIC FIELD SAMPLING PLAN, LANDFILL NO. 3, PARCEL 80(6).

The Final Site-Specific Field Sampling Plan (FSSFSP) proposed setting permanent steel outer casing 5 feet into competent bedrock and grouting the outer casing in place using a bentonite-cement grout. The permanent outer casing at monitoring well OLF-G25 was grouted in place 107 feet below ground surface (bgs) prior to reaching competent bedrock.

Identified by: Wally Cooper, Geologist

Date: 6/21/01

II. Justification for Variance:

During the installation of the outer casing at monitoring well OLF-G25, the drill rig was unable to advance the outer casing below 107 feet bgs due to hard mudstone encountered during drilling. A decision was made by the IT Site Manager and the U. S. Army Corps of Engineers to grout the outer casing in place at 107 feet bgs. This variance did not alter the scope or intent of the Monitoring Well Installation and Field Sampling Plan at Landfill No. 3.

III. Applicable Document/Work Plan: (by the person identifying the change)

Final Site-Specific Groundwater Monitoring Well Installation and Field Sampling Plan Attachment and Site-Specific Safety and Health Plan Attachment, Landfill No. 3, Parcel 80(6).

Project Number: 796886.01060400

-Variance Report -

I.Description: (by the person identifying the change)

FINAL SITE-SPECIFIC FIELD SAMPLING PLAN, LANDFILL NO. 3, PARCEL 80(6).

The Final Site-Specific Field Sampling Plan (FSSFSP) proposed residuum monitoring wells OLF-G24, OLF-G26, and OLF-G28 with a sump, approximately 5 feet in length. Residuum monitoring wells OLF-G24 and OLF-G26 were constructed using an end cap, 0.4 feet in length, and no sump.

Identified by: Jeffrey Tarr, PG – IT Site Manager

Date: 8-13-01

II. Justification for Variance:

The FSSFSP proposed the installation of three residuum monitoring wells constructed with a sump measuring approximately 5 feet in length. During the development of monitoring wells OLF-G21, OLF-G22, OLF-G23, OLF-G27, and OLF-G28 at Landfill #3, no major accumulation of sediment was observed in the sump. Therefore, a sump was eliminated during the installation of monitoring wells OLF-G24 and OLF-G26. This variance will not alter the scope or intent of the Groundwater Monitoring Well Installation and Field Sampling Plan at Landfill 3.

III. Applicable Document/Work Plan: (by the person identifying the change)

Final Site-Specific Groundwater Monitoring Well Installation and Field Sampling Plan Attachment and Site-Specific Safety and Health Plan Attachment, Landfill No. 3, Parcel 80(6).

I.Description: (by the person identifying the change)

FINAL SITE-SPECIFIC FIELD SAMPLING PLAN, LANDFILL NO. 3, PARCEL 80(6).

The Final Site-Specific Field Sampling Plan (FSSFSP) proposed the installation of residuum monitoring wells OLF-G24, OLF-G26, and OLF-G28 using 6 5/8-inch inside diameter hollow-stem augers. Monitoring wells OLF-G24, OLF-G26, and OLF-G28 were installed using a sonic drill rig with a 7 5/8-inch casing and a 7 7/8-inch bit.

Identified by: Wally Cooper - Geologist

Date: 8-13-01

II. Justification for Variance:

The FSSFSP proposed the installation of three residuum monitoring wells OLF-G24, OLF-G26, and OLF-G28 using a hollow-stem auger drill rig. During drilling operations with a sonic drill rig at adjacent bedrock monitoring well locations, highly weathered mudstone was encountered. This lithology would have prevented the hollow-stem auger drill rig from reaching the groundwater and target depth for the residuum wells. After consultation with the U.S. Army Corps of Engineers, a decision was made to install the three wells using a sonic drill rig. This variance will not alter the intent of the Groundwater Monitoring Well Installation and Field Sampling Plan for Landfill 3.

III. Applicable Document/Work Plan: (by the person identifying the change)

Final Site-Specific Groundwater Monitoring Well Installation and Field Sampling Plan Attachment and Site-Specific Safety and Health Plan Attachment, Landfill No. 3, Parcel 80(6).

Distribution List:
1. Jeanne Yacoub, IT Project Manager

Project Number: 796886.01060400

-Variance Report -

I.Description: (by the person identifying the change)

FINAL SITE-SPECIFIC FIELD SAMPLING PLAN, LANDFILL NO. 3, PARCEL 80(6).

The Final Site-Specific Field Sampling Plan (FSSFSP) proposed residuum monitoring well OLF-G26 and bedrock monitoring well OLF-G25 500 feet west of residuum monitoring well OLF-G08. Residuum monitoring well OLF-G26 and bedrock monitoring well OLF-G25 were installed approximately 375 feet west of OLF-G08.

Identified by: Wally Cooper – IT Geologist

Date: 8-14-01

II. Justification for Variance:

The FSSFSP proposed residuum monitoring well OLF-G26 and bedrock monitoring well OLF-G25 on private property, approximately 500 feet west of residuum monitoring well OLF-G08. The proposed location of the wells required that the wells be installed on the western edge of the private property. Based on the private property owner's request, the well locations were moved to the eastern edge of the property, approximately 375 feet west of OLF-G08, approximately 125 feet east of the proposed location, and in an area that would not disrupt the property owner's daily activities. This variance will not alter the scope or intent of the Groundwater Monitoring Well Installation and Field Sampling Plan for Landfill 3.

III. Applicable Document/Work Plan: (by the person identifying the change)

Final Site-Specific Groundwater Monitoring Well Installation and Field Sampling Plan Attachment and Site-Specific Safety and Health Plan Attachment, Landfill No. 3, Parcel 80(6).

FINAL SITE-SPECIFIC FIELD SAMPLING PLAN, LANDFILL NO. 3, PARCEL 80(6).

The Final Site-Specific Field Sampling Plan (FSSFSP) proposed the installation of two residuum monitoring wells and seven bedrock monitoring wells (OLF-G20 through OLF-G28). The wells were to be constructed with a five-foot bentonite seal above the filter pack and completed with a bentonite-cement grout from the top of the bentonite seal to ground surface. Monitoring well OLF-G28 was constructed using an 88 foot bentonite seal from the top of the filter pack to above the top of fractured bedrock and the water table. Once the bentonite seal was above the top of bedrock and the water table, bentonite-cement grout was used to grout the remaining annular space to ground surface.

Identified by: Wally Cooper, Geologist

Date: 9-04-01

II. Justification for Variance:

During rock coring at adjacent monitoring well location OLF-G27 (located approximately 10 feet from OLF-G28), numerous fractures and voids were encountered. Because of the concern of cement grout migrating through fractures and affecting the groundwater pH, a bentonite seal was used from the top of the filter pack to above the top of bedrock and the water table. Bentonite-cement grout was used to grout the remaining annular space from the top of the bentonite seal to ground surface. This variance will not alter the scope or intent of the Groundwater Monitoring Well Installation and Field Sampling Plan at Landfill 3.

I.Description: (by the person identifying the change)

FINAL SITE-SPECIFIC FIELD SAMPLING PLAN – REMEDIAL INVESTIGATION AT LANDFILL 3, PARCEL 80(6)

The Final Site-Specific Field Sampling Plan (FSSFSP) for the Remedial Investigation at Landfill No. 3 proposed the collection of thirty-eight groundwater samples from existing and recently installed monitoring wells. However, two of the thirty-eight proposed groundwater samples were not collected. Groundwater samples were not collected from existing monitoring wells OLF-G06 and OLF-G16.

Identified by: Jeffrey J. Tarr, PG – IT Site Manager

Date: 6-3-02

II. Justification for Variance:

The FSSFSP proposed the collection of thirty-eight groundwater samples. During groundwater sampling activities in May, 2002, existing monitoring wells OLF-G06 and OLF-G16 were dry. Several attempts were made to collect a groundwater sample from each well, but all attempts were unsuccessful. Therefore, groundwater samples were not collected. Both monitoring wells were dry during groundwater sampling activities at Landfill No. 3 in June, 2001. Currently, these wells are being monitored for the presence of groundwater. Should either well contain groundwater, a sample will be collected for chemical analysis.

DRAFT SITE-SPECIFIC FIELD SAMPLING PLAN ADDENDUM III FOR THE REMEDIAL INVESTIGATION AT LANDFILL 3, PARCEL 80(6)

The Draft Site-Specific Field Sampling Plan (DSSFSP) proposed the collection of a groundwater sample from 47 monitoring wells (37 pre-existing monitoring wells and 10 newly installed monitoring wells) and two residential wells (Medders and Lowery). A groundwater sample was not collected from monitoring well OLF-G16 or the Medders well.

Identified by: Jeffrey J. Tarr, PG – Shaw Site Manager
Date: May 21, 2003

II. Justification for Variance:

The DSSFSP proposed the collection of a groundwater sample from 47 monitoring wells and 2 residential wells. Groundwater was not present during sampling activities at OLF-G16. Several attempts were made to collect a sample, but monitoring well OLF-G16 was dry. During a telephone conversation with Mr. Ed Blocker (U.S. Army Corps of Engineers – Mobile District), Jeffrey Tarr (Shaw Site Manager), and Mr. Josh Jenkins (Shaw Technical Lead), Mr. Medders made a decision to not have a groundwater sample collected from his well. Therefore, two of the proposed groundwater samples (OLF-G16 and Medders) were not collected for chemical analysis. This variance will not alter the intent of the remedial investigation at Landfill 3.

.

III. Applicable Document/Work Plan: **(by the person identifying the change)**

Draft Site-Specific Field Sampling Plan Addendum III for the Remedial Investigation at Landfill No. 3, Parcel 80(6), Fort McClellan, Alabama, November 19, 2002.

I.Description: **(by the person identifying the change)**
FINAL SITE-SPECIFIC FIELD SAMPLING PLAN – REMEDIAL INVESTIGATION AT LANDFILL 3, PARCEL 80(6)

The Final Site-Specific Field Sampling Plan (FSSFSP) for the Site Investigation at Landfill No. 3 proposed the collection of nineteen groundwater samples from existing monitoring wells. However, two of the nineteen proposed groundwater samples were not collected. Groundwater samples were not collected from existing monitoring wells OLF-G06 and OLF-G16.

Identified by: Kyle Q. Wilson – Shaw Geologist
Date: 3-2-04

II. Justification for Variance:

The FSSFSP proposed the collection of nineteen groundwater samples. During groundwater sampling activities in February 1998, existing monitoring wells OLF-G06 and OLF-G16 were dry. Several attempts were made to collect groundwater samples, but all attempts were unsuccessful.

-Variance Report -

I.Description: **(by the person identifying the change)**
The Final Site-Specific Field Sampling Plan (FSSFSP) proposed the collection of twenty-seven groundwater samples from existing and recently installed monitoring wells. However, two of the twenty-seven proposed groundwater samples were not collected. Groundwater samples were not collected from existing monitoring wells OLF-G06 and OLF-G16.

Identified by: Kyle Q. Wilson – Shaw Geologist
Date: 3-2-04

II. Justification for Variance:

The FSSFSP proposed the collection of twenty-seven groundwater samples. During groundwater sampling activities in June, 2001, existing monitoring wells OLF-G06 and OLF-G16 were dry. Several attempts were made to collect groundwater samples, but all attempts were unsuccessful. It should be noted that both monitoring wells were dry during groundwater sampling activities at Landfill No.3 in February 1998.
